

## Wyoming Comprehensive Cancer Control Program

The Comprehensive Cancer Control Program consists of staff that work together to help reduce the burden of cancer in Wyoming through outreach, education, and support of the Wyoming Comprehensive Cancer Control Consortium (WCCCC).

They work with WCCCC leadership to facilitate the development and implementation of the statewide Cancer Control Plan.

Additionally, they oversee the Wyoming Cancer Resource Services (WCRS) Program, which provides community level cancer prevention and control services, including education and awareness, promotion of screening and early detection, and resource navigation for Wyoming residents.

For more information on the WCCCC, the Comprehensive Cancer Control Program, or the WCRS please visit [fightcancerwy.org](http://fightcancerwy.org)

Detection Program

## Wyoming Colorectal Cancer Screening Program

Every year, almost 250 Wyoming men and women are diagnosed with colorectal cancer. It is the second leading cause of cancer related deaths in our state, following lung cancer. Colorectal cancer can often be prevented through appropriate screening.

The program provides fecal immunochemical testing (stool testing) and colonoscopy screenings to individuals who qualify.

Most people with early colon or rectal cancer do not have symptoms. Symptoms usually only appear in more advanced cases, which is why getting screened as recommended is important.

### Increased risk factors include:

- ⇒ Age 50 or older.
  - ⇒ A history of Inflammatory Bowel Disease, Crohn's Disease, or ulcerative colitis.
  - ⇒ Family history of colorectal cancer or certain hereditary risk factors.
  - ⇒ You have previously had colorectal cancer or pre-cancerous polyps.
- 

## Wyoming Breast and Cervical Cancer Early Detection Program

Approximately 350 Wyoming residents are diagnosed each year with breast cancer, and it is the third leading cause of cancer related deaths in Wyoming, following colorectal cancer.

The Breast and Cervical Cancer Program assists qualifying women in obtaining mammograms, clinical breast exams, pelvic exams, and pap tests.

Most women diagnosed through the program with breast or cervical cancer are eligible to be transitioned to Wyoming Medicaid for coverage of treatment.

### Symptoms of breast cancer can include:

- ◆ A new or changed lump in the breast.
  - ◆ Persistent pain in the breast.
  - ◆ Flaky, red, swollen skin or dimpling anywhere on the breast.
  - ◆ Nipple discharge that is not milk when nursing a baby.
- 

## Do I Qualify?

- ☐ You have been a Wyoming resident for at least one year.
- ☐ You are 50 years of age or older.
- ☐ Your household income is under 250% of the federal poverty guidelines.
- ☐ You are uninsured (including Medicare or Medicaid).
- ☐ In some cases, under-insured (high deductible or co-pay) residents may qualify for the colorectal screening program.

## You may also qualify if:

- You have a family history of colorectal cancer or certain hereditary risk factors.
  - You have previously been diagnosed with breast or cervical cancer, colorectal cancer or polyps (age 40–49).
  - You have not had a Pap test within the last 5 years (women age 30-49).
  - You have been diagnosed with suspicious symptoms that could indicate cervical pre-cancer or cancer (women age 21-49).
  - You have been diagnosed with suspicious symptoms that could indicate breast cancer (women age 18-49).
-
